

Pivot Table:

1. Which Product generates the most sales?

From the Pivot Table, we can already conclude that:

- **Product_174** was the highest-performing product, generating a total of **3690** sales across the four-month period.
- The top five products all generated more than **3500** sales, indicating strong demand and highlighting key products driving overall business performance.

2. Which product has the least sales?

- Product_278 recorded the lowest sales performance, generating a total of **391** sales during the four-month period.
- Other low-performing products also generated fewer than **510** total sales, suggesting that some products may have experienced low customer demand, seasonal effects, pricing challenges, or limited marketing exposure.

3. Which product category sells the most (performs the most)?

- Toys was the best-performing category, generating **310,244** total sales.
- Home & Kitchen was the lowest-performing category, generating **243,151** total sales.
- The top three categories (**Toys, Books, and Sports**) performed very similarly, each generating over **309,000** sales.

4. How do sales change overtime?

- Month 2 recorded the highest sales, generating a total of 507661 sales.
- Month 1 recorded the least sales, generating a total of 498306 sales.
- Sales increased significantly from Month 1 to Month 2.
- Sales remained relatively stable in Months 3 and 4, with only slight decreases.
- Sales performance showed a positive trend from Month 1 to Month 2, followed by a relatively stable performance during Months 3 and 4. Although sales declined slightly after Month 2, monthly sales remained above 500,000, showing consistent business performance throughout the four-month period.

5. Evaluation of customer satisfaction based on reviews.

- The Books category recorded the highest average customer review score of **3.10**, indicating relatively higher customer satisfaction compared to other categories.
- Conversely, the Toys category had the lowest average review score of **2.87**, suggesting lower customer satisfaction levels.

6. Business recommendations based on analysis.

- **Implement promotional strategies for low-performing products** - The business should introduce limited-time discounts, bundle offers, or seasonal promotions for low-performing products to increase customer demand and improve sales performance.
- **Increase marketing investment for underperforming products and categories** - The business should allocate more marketing resources to low-selling products and categories, particularly Home & Kitchen, to improve product visibility and attract more customers.
- **Analyse top-performing products for best practice** - The business should investigate why products such as Product_174 perform exceptionally well and apply similar pricing, marketing, and product strategies to other products.
- **Maintain and strengthen sales performance** - Since sales remained relatively stable after reaching their peak in Month 2, the business should continue monitoring sales trends and implement strategies to sustain growth over time.

7. Additional Insights

The category with the highest sales (**Toys**) does not have the highest customer satisfaction score, suggesting that high sales do not necessarily translate to high customer satisfaction.

Key Findings

- Total sales = 2,016,529
- Top product = Product_174
- Best category = Toys
- Best month = Month 2

Customer Insights

- Electronics had the highest customer satisfaction.
- Toys had the lowest customer satisfaction.

Business Recommendations

- Increase marketing for low selling products.
- Introduce promotional discounts.
- Improve customer service and refund policies.

Conclusion

The analysis showed that the business generated a total of **2,016,529** sales, with **Month 2** recording the highest sales performance. The **Toys** category generated the highest total sales, while **Product_174** was identified as the best-performing product.

Customer satisfaction analysis revealed that review scores were relatively consistent across categories, although the highest-selling category did not have the highest customer satisfaction score.

Based on these findings, the business can improve performance by investing in marketing strategies for low-performing products, offering promotional campaigns, and focusing on improving customer satisfaction and trust.
